EDUCATION

Georgia Institute of Technology

May 2028

Master of Science in Analytics, Computational Data

University of Washington

Aug 2023

Bachelor of Science in Computer Science and Software Engineering

WORK EXPERIENCE

Fiduciary Tech | Business Analyst Intern

May 2023 - Jul 2023

- Collaborated with engineering, QA, and analytics teams to translate business requirements into 10+ implementation-ready Salesforce user stories for a \$1M e-commerce initiative
- Performed SIT/UAT validation across Salesforce workflows, identifying defects and coordinating issue prioritization to maintain delivery timelines
- Standardized 50+ Salesforce metadata elements across workflows by coordinating alignment discussions with engineers and QA teams, improving consistency across implementation processes

Fogo de Chão | Inventory Coordinator (Part-Time)

Jul 2023 - Aug 2025

- Managed inventory tracking and forecasting recommendations directly to management, translating on-the-ground data into actionable decisions that reduced waste and improved accuracy by 15–20%.

TECHNICAL PROJECTS

GT OMSA Discord Server

May 2026

- Launched and grew an OMSA cohort Discord server to 400+ members, coordinating a moderation team and structuring 36 course-specific channels to centralize academic resources and peer support at scale
- Developed automation bots to streamline server maintenance, onboarding workflows, and communication logistics for a growing academic community, using AI-assisted development tools including GitHub Copilot and Claude

AI-Assisted Cognitive Performance Dashboard https://leannevuprojects.up.railway.app/my_dashboard

Apr 2026

- Leveraged AI tools to investigate and combine a Pomodoro-style study timer, habit-tracking calendar with color-coded completion states, and AI-assisted CSV ingestion pipelines to auto-generate structured function/parameter/syntax reference data, reducing manual entry and accelerating knowledge capture across a 1,000+ row personal knowledge base
- Conducted a semester-long behavioral self-experiment tracking study hours, habit consistency, and academic outcomes by utilizing AI coding assistants to prototype features

Reddit Economic Sentiment Analysis <https://leannevu.github.io/blog/posts/reddit-sentiment/index.html>

Dec 2025

- Architected a Reddit API pipeline to ingest unstructured text, evaluate ML model tradeoffs, and translate findings into a paper researching social signals for economic insight
- Compared performance between feature and model choices (lexicon-based vs. hybrid approaches; linear vs. tree-based models), emphasizing limitations and tradeoffs rather than raw accuracy

EDA Dashboard (Exploratory Data Analysis Dashboard) <https://leannevuprojects.up.railway.app/analysis-productivity>

Aug 2025

- Developed an interactive Flask web app that walks users through a structured exploratory data analysis of social-media use and productivity, featuring Jupyter-style color-coded code blocks and dynamic visualizations
- Integrated Flask, Pandas, Matplotlib, Seaborn, HTML/CSS, and JavaScript to automate data storytelling and present key statistical insights; deployed on Railway

ADDITIONAL INFORMATION

Programming: Python, SQL, JavaScript, PHP, HTML, CSS, (Flask, Pandas, Numpy, jQuery)

Tools/Platforms: Git, Github, Jupyter Notebook, Railway, Discord API

Concepts: REST APIs, Agile/SCRUM, Data Visualization, Machine Learning, Full Stack Development

AI-Assisted Development: GitHub Copilot, Claude, Cursor
